PROFESSIONAL SUMMARY

Frontend Developer with 4+ years of experience building scalable, production-ready web applications using React.js, Next.js, and TypeScript. Strong track record of designing real-time systems, integrating complex APIs, and shipping full features end to end. At Newron I worked across the stack using Node.js and PostgreSQL, deployed on AWS, and also built mobile-friendly experiences using React Native WebView. At Qdegrees I collaborated with Python backend teams and worked with Microsoft Azure. I care about writing clean, maintainable code and take full ownership from design to deployment.

IMPACT AT A GLANCE

100K+ Events processed via real-time WebSocket system in 7 months	94% Faster support response time, from 48 hrs down to 3 hrs	89% Less Overhead admin workload cut across 15+ institutions
---	---	--

PROFESSIONAL EXPERIENCE

Software Engineer · **Newron – School ERP Startup** · Pune, Maharashtra Jan 2024 – Present

- ▶ **Multi-portal School ERP:** Designed and built a multi-role School ERP platform serving 15+ institutions. The admin panel was built with React.js and Tailwind CSS for a clean, responsive experience. The student, parent, and employee apps were built with React.js and Material UI and wrapped in React Native WebView, making the web application accessible as a native mobile app without a separate codebase.
- ▶ **Real-time ticketing system:** Architected a Helpdesk and Ticketing module using event-driven architecture with WebSockets (Socket.io) and a Node.js backend. The system processed over 100,000 tickets in 7 months with a 92% resolution rate, cutting average response time from 48 hours down to 3 hours.
- ▶ **AWS deployment:** Deployed frontend builds on AWS S3 with CloudFront for CDN delivery and used EC2 instances for backend hosting. Set up CI/CD pipelines for automated builds and deployments, removing the need for manual releases.
- ▶ **Live GPS tracking:** Built a real-time school bus tracking feature with a Node.js backend streaming live GPS coordinates and Google Maps API integrated into the React frontend, covering 50+ buses. Parent inquiry calls dropped by 78% after launch.
- ▶ **Analytics dashboards and modules:** Developed data-intensive admin dashboards using React and ApexCharts, backed by optimized PostgreSQL queries, giving school administrators real-time visibility into attendance, finances, and resource utilization. Also built the Discipline Module for tracking and managing student conduct records, and the Student-Parent Connect Module enabling direct in-app communication between parents and school staff.
- ▶ **Payment integrations:** Integrated HDFC, Razorpay, and PayU payment gateways via RESTful APIs with automated reconciliation workflows, improving transaction success rates and reducing manual finance work.
- ▶ **Auth and access control:** Implemented JWT-based authentication and role-based access control across all user roles, keeping each portal secure and ensuring users only access what they are permitted to.

Frontend Developer · **Qdegrees** · Jaipur, Rajasthan Feb 2022 – Oct 2023

- ▶ **Large-scale e-commerce platform:** Led frontend development of a building-materials e-commerce platform using Next.js and React.js with Material UI, covering 45+ product categories from initial project setup through to production launch.
- ▶ **SSR and SSG for SEO:** Implemented server-side rendering and static site generation in Next.js, which noticeably improved organic search rankings, cut page load times, and boosted Core Web Vitals scores after deployment.
- ▶ **Python backend collaboration:** Worked closely with the Python backend team to integrate REST APIs across product listings, inventory, user sessions, and checkout flows, ensuring smooth and reliable data exchange between frontend and backend.
- ▶ **Microsoft Azure:** Assisted in deploying frontend builds on Azure Static Web Apps and integrated Azure Blob Storage for product image hosting and CDN delivery, improving asset load times across the platform.

- **Multi-role onboarding:** Built buyer and seller onboarding flows with dynamic form validations, conditional logic, and API integrations, improving conversion rates and reducing drop-offs during signup.
- **Redux Saga for async state:** Managed complex async workflows for inventory sync, product filtering, sorting, and pagination using Redux Saga, keeping the UI responsive even with large data sets.

TECHNICAL SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, Redux Toolkit, Redux Saga, Context API, HTML5, CSS3, Tailwind CSS, Material UI, Ant Design
Mobile	React Native WebView (Student, Parent, Employee apps)
Backend	Node.js, Python, FastAPI, REST API design, JWT Auth, OAuth 2.0, GraphQL
Cloud	AWS (S3, CloudFront, EC2), Microsoft Azure (Static Web Apps, Blob Storage), CI/CD Pipelines
Databases	PostgreSQL (SQL/RDS), MongoDB (NoSQL), Redis, query optimization, data modelling
Real-time	WebSockets (Socket.io), Event-driven architecture, Live data streaming
DevOps and Infra	Docker, Git, GitHub, GitLab, Webpack, Babel, npm, Yarn
Testing and Tools	Jest, React Testing Library, Postman, Figma, Jira, Agile/Scrum, Chrome DevTools
Integrations	Razorpay, PayU, HDFC Payment Gateway, Google Maps API, ApexCharts

EDUCATION

B.Tech in Information Technology · Government Engineering College, Bikaner, Rajasthan

2015 – 2019
